SmartVan

An Innovative App-Based Solution for Van Stock Inventory Management

SmartVan is an automated solution for fast issuance and efficient restock.

The SmartVan solution enables customers to effectively manage and control usage of inventory on vans and can increase first time fix rate to 97%.

SmartVan offers real time inventory usage by user and the ability to charge capture by job number for budgetary and invoicing purposes.

SmartVan provides automated reordering to multiple suppliers through the Sourcerer cloud-based software platform.

Benefits of SmartVan

Reduces stock-outs:
- Items are automatically reordered on the appropriate supplier when stocks fall below their replenishment levels. Ensures you always have the right product, in the right place at the right time.

Increases productivity:
- Can increase first time fix rate up to 97%, allowing for more jobs to be completed per day.
- Automated KPI's help to measure service level agreements and drive improvement.

Ease of use:
- SmartVan app is simple and intuitive to navigate.

Reduce costs:
- Minimise wastage and loss from overstocking.
- Reduces manual processes and administrative work.
- Ensures compliance to contractual supplier agreements.

Accessibility:
- Linked to Inventor-e's Sourcerer cloud–based software platform, providing access to reports and real time management information.
- It can be used with NFC or barcodes.
- Available in Android and iOS.

Real-time transparent stock data:
- View stock balances per van at any time on-line or via SmartSearch function within the app. Analyse slow-moving parts and parts ordered regularly. Issue assets via the App using NFC tags or barcodes.

Feature Rich Control of Inventory on Vans

- A quick and easy to use low touch NFC solution that allows two-way communication.
- All product locations can be electronically tagged.
- Thousands of barcode locations can be uploaded into Sourcerer in less than a minute.
- Easily access data and enterprise-wide reports across multiple sites, departments, and stocking locations.

- Controls assets, issues and returns to and from specific users and provides a complete audit trail.
- Dynamic charge capture with job numbers automatically updated.
- Records information of who, has taken what, where, when and why.
- User profiles dictate function availability.
- Automated goods receipt, is available, through the Sourcerer purchase order module.
